

HYSPLIT Dispersion Model Upgrade V7.2.0

EMC CCB Meeting
14 May 2014

Roland Draxler, Barbara Stunder,
Tianfeng Chai (NOAA/ARL)
Jianping Huang, Perry Shafran,
Jeff McQueen (NCEP/EMC)

Charter Overview

This project is an NWS and NCEP milestone for Q4FY14

HYSPLIT description : Current Operational Dispersion Products

- 48-hour wild-fire **smoke** forecasts (06 UTC cycle) for CONUS, AK, HI
- 48-hour **dust** forecasts (06 and 12 UTC cycles) for CONUS
- 48-hour **volcanic ash** forecasts whenever requested by the ICAO-designated U.S VAACS (Washington, DC, Anchorage, AK).
- 72-hour radiological emergency response plume forecast when requested per the **WMO-RSMC** arrangements (IAEA or other country's NMS).
- 48-hour back-tracking product when requested per the WMO/RSMC arrangement
- 16-hour dispersion forecast for **HAZMAT**-type (chemical spill, explosion, etc.) incident upon the request of a WFO; and for about 25 pre-determined locations 4x/day

Charter Overview

Overview of Changes in Version 7.2

- **ALL** – Update to **unified HYSPLIT** code and libraries
- **CTBTO** – New application & NCO web GUI for model configuration
 - Extend retention of **GDAS/GFS ARL packed** format files
→ /com/hysplit **to 30 days**
- **Volcanic Ash** – Add $\frac{1}{2}^{\circ}$ **GFS** hysplit format files
- **RSMC**
 - radiological text product to MWOs (AWC, Anchorage and Honolulu)
 - Add $\frac{1}{2}^{\circ}$ GFS hysplit format files
- **WFO Hazmat** – Improved Google Earth Graphics (NCO is backup)
- **Smoke** – Include **Canadian & Mexican** emissions
- **Dust** – No specific changes

Charter Overview

Expected Benefits to End Users

- **ICAO and FAA** – via NWS/ASB – radiological advisory product accessible to Meteorological Watch Offices (NCEP AWC, Anchorage and Honolulu WFOs)
- **WMO-RSMC** – updated nuclear power plant latitudes-longitudes
- **CTBTO** – new requirement
- **NWS WFOs/HAZMAT** – improved Google Earth graphics
- **Simpler version control** by re-compiling all code with the same (updated) HYSPLIT library
- **Consistency** of all NCEP HYSPLIT dispersion applications running the same code
- Better able to simulate dispersion for with the **higher-resolution GFS**
- Use of a **new web-based SDM interface** for the CTBTO back-tracking application (NCO transitioning with ARL)
- **Implement** smoke and dust satellite based **verification**.

Development testing

- **HYSPLIT V7.2 run at ARL for 4 months**
 - ARL runs:
 - DATEM experiments (details follow) to compare boundary-layer dispersion model output to measurements.
 - "TEST" job for volcanic ash, RSMC, WFO-request
- **Built and tested at EMC since Feb. 2014**
 - EMC Frozen parallel on March 2014
- **EMC Real-time and Retrospective Parallels**
 - Smoke: July 8 – Sept. 15, 2013
 - CTBTO: December, 2013 - May 2014
 - smoke/dust with parallel NAM – Feb-May 2014

Recommended length of time for official evaluation parallel:

30 days (except CTBTO given rarity of events to begin June 2014, ~ 2 events per month)

Testing Summary

- ARL Retro field experiment tests (DATEM) show similar performance
- CTBTO testing results same as ARL with updated HYSPLIT
- *Extensive smoke and dust testing* → positive impact w/ CA/MX emissions
- *Volcanic ash – 2010 case*
- *RSMC radiation -> Fukushima case*

EMC PARALLEL EVALUATIONS

- Smoke/Dust: NESDIS & EMC evaluated parallel runs
- CTBTO: running in parallel and compared to ARL parallel cases
- EMC and ARL web sites for displays

DATEM – Data Archive of Tracer Experiments and Meteorology

<http://www.arl.noaa.gov/DATEM.php>

- Database for verification of boundary-layer dispersion:
 - Many tracer releases (CAPTEX, ETEX, etc.)
 - Various horizontal scales (5 km to 3000 km)
 - Various meteorological situations
 - NARR used for in older experiments (pre 2000)
- Updated HYSPLIT v7.2.0 and prod v7.0.3 comparison:
 - performance is about the same.

DATEM – Data Archive of Tracer Experiments and Meteorology

Radiological (RSMC/HAZMAT) Evaluation

Fukushima-Daiichi Nuclear Power Plant, March 2011

Measured Deposition

- Measurements were taken one year after the accident.
- The bulk of the deposition shown to the northwest of the FDNPP was the result of a single event that occurred between 14-16 March 2011.
- Note the lack of deposition over the Kanto plain toward Tokyo and the constraints provided by the mountains to the west.

The measured deposition pattern for Cs-137 is shown here in color interpolated to the HYSPLIT 5-km resolution deposition grid.

The black contours show the terrain features at 250 m intervals.

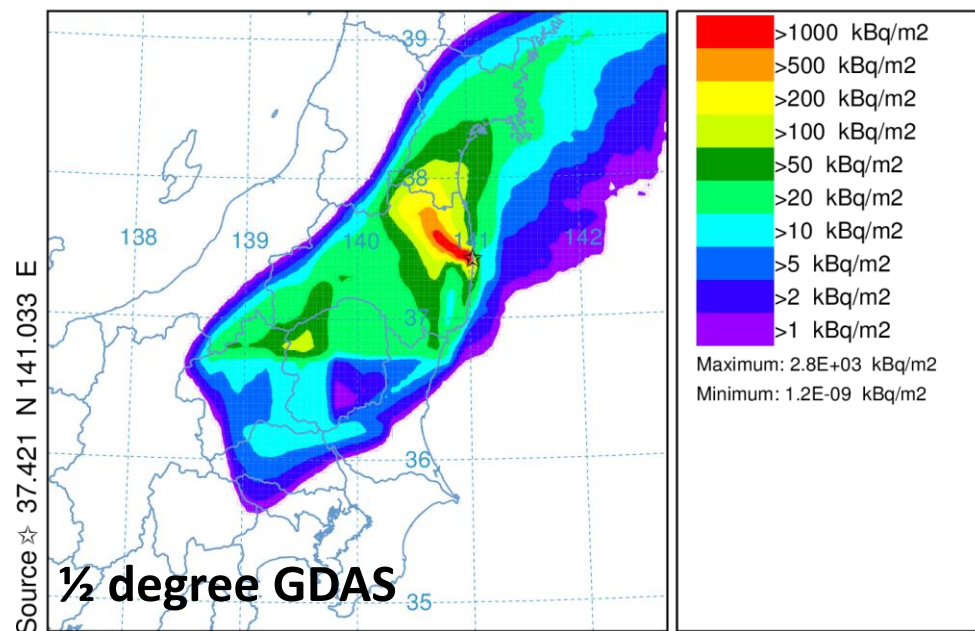

Radiological (RSMC/HAZMAT) Evaluation

Fukushima-Daiichi Nuclear Power Plant Accident

Cs-137 deposition for emissions only 14-15 March 2011

Cs-137 deposition GDAS half-degree

Deposition (kBq/m²) at ground-level
Integrated from 0900 14 Mar to 2100 15 Mar 11 (UTC)
Release started at 0900 14 Mar 11 (UTC)

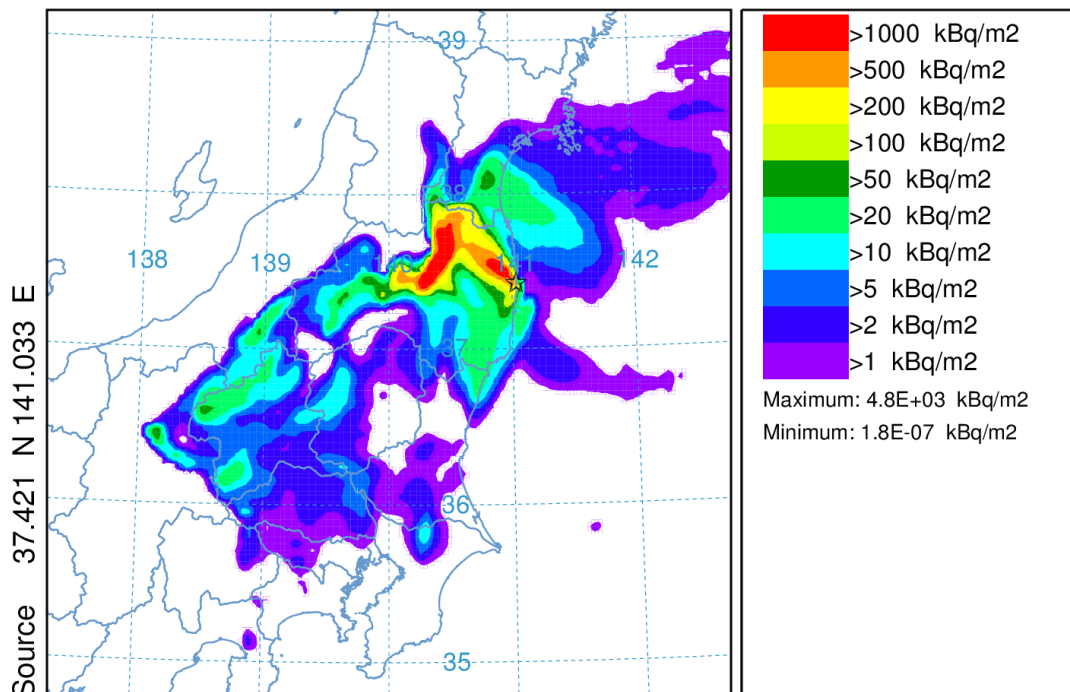

- Lacks the detailed structure and underestimates maximum deposition region to the northwest of FDNPP.
- High deposition region turned more to the south than shown in the measured pattern.

- Structure is very similar
- Maximum deposition and direction of the high deposition region are almost identical to measured.
- Rectangular deposition structure to the south:
 - deposition : strong sensitivity to wet removal processes & resolution of precipitation fields.

JMA 5-km mesoscale

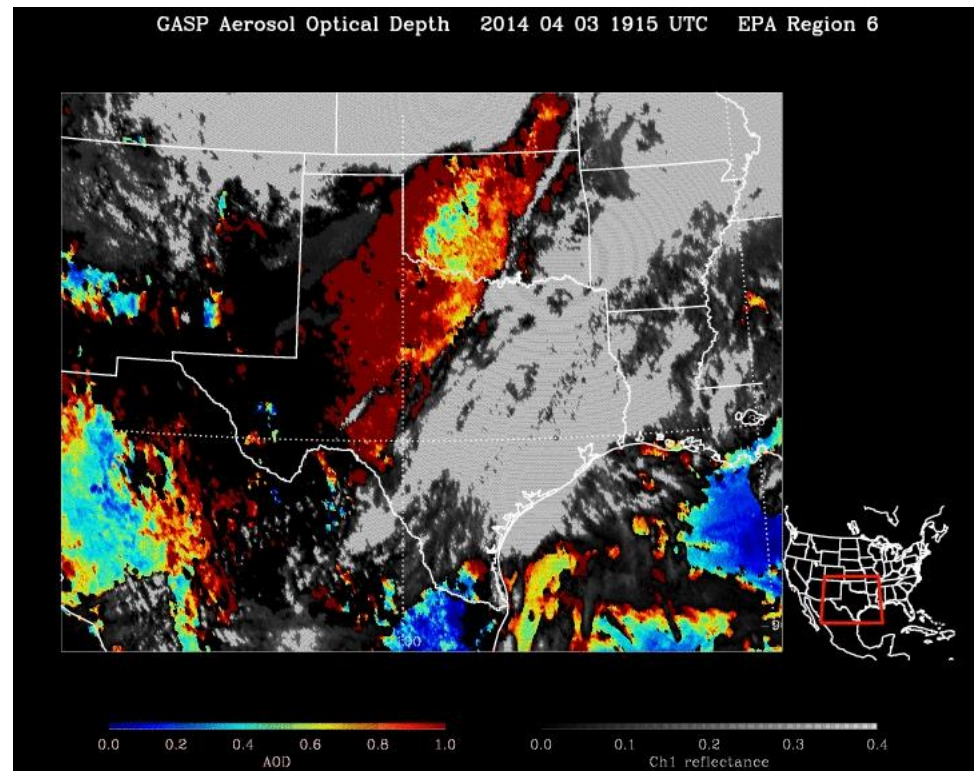

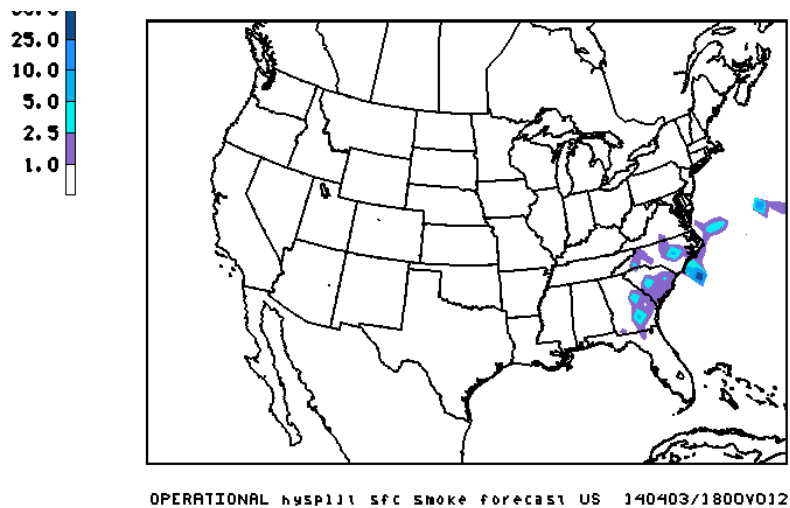

For reference, the Cs-137 deposition pattern shown here was computed using the 5-km resolution mesoscale analysis from the Japan Meteorological Agency. Although the calculated deposition pattern shows more structure than the other calculations, the adjacent high and low values do not compare favorably with the smoother measured pattern. However, [this calculation does capture the “elbow” pattern in the high deposition region, although the values are over-predicted](#). This over-prediction is believed to be due to the fact that wet removal in the mountain regions was primarily in the form of snow, which is less efficient than removal by rainfall. [Future HYSPLIT revisions will account for different precipitation types.](#)

Cs-137 deposition JMA 5-km meso
Deposition (kBq/m²) at ground-level
Integrated from 0900 14 Mar to 2100 15 Mar 11 (UTC)
Release started at 0900 14 Mar 11 (UTC)

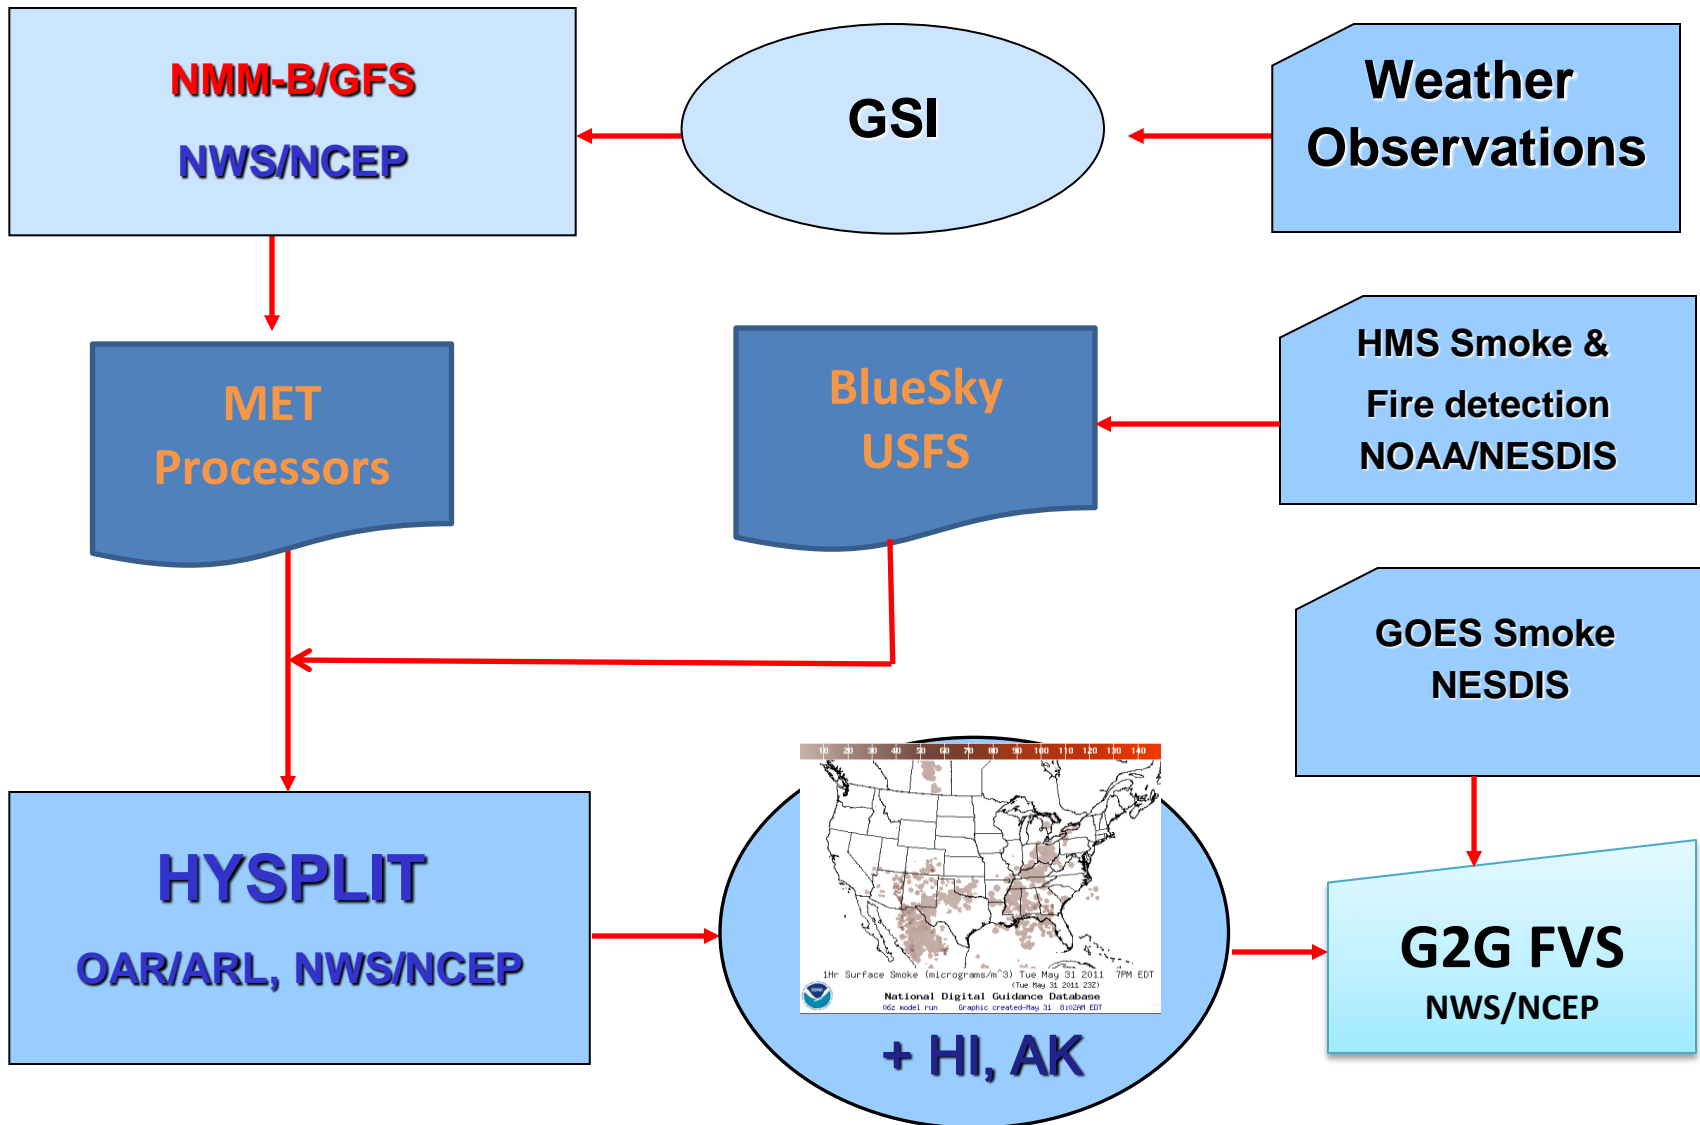

HYSPLIT Wild fire Smoke Application

NESDIS GASP Imagery of fire smoke on April 3, 2014.

Smoke primarily from Mexican fires not included in operational HYSPLIT Smoke forecast system.

HYSPLIT Smoke Forecasting System

Canada/ Mexico Emission impact

July 8 – Sept. 15, 2013 CONUS CSI verification

<http://www.emc.ncep.noaa.gov/mmb/aq/fvs/hysplit/web/html/fho.html>

Using NDFD 5 km G227 model output grid

- Now 7 days missing from parallel run
- Slight improvement for >10 ug/m3 thresholds
- Similar for low smoke thresholds

Canada/ Mexico Emission impact

July 8 – Sept. 15, 2013 CONUS, East, West Regions

- <http://www.emc.ncep.noaa.gov/mmb/aa/fvs/hysplit/web/html/fho.html>
- Some impact in Western Region

Canada/ Mexico Emission impact

July 8 – Sept. 15, 2013 East and West Regions

Comprehensive Test Ban Treaty Organization back-tracking

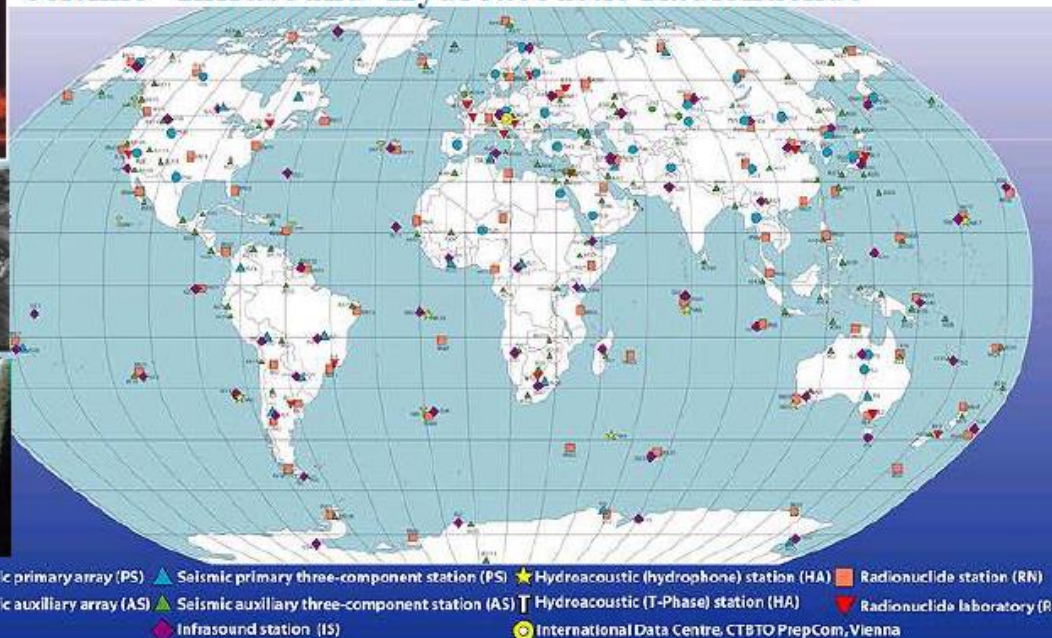

CTBTO

CTBT (Comprehensive Nuclear-Test-Ban Treaty) bans all nuclear explosions
CTBTO(Comprehensive Nuclear-Test-Ban Treaty Organization) operates a system
(International Monitoring System) monitoring compliance with the CTBT

Monitoring based on four technologies

Seismic Infrasound Hydroacoustic Radionuclide

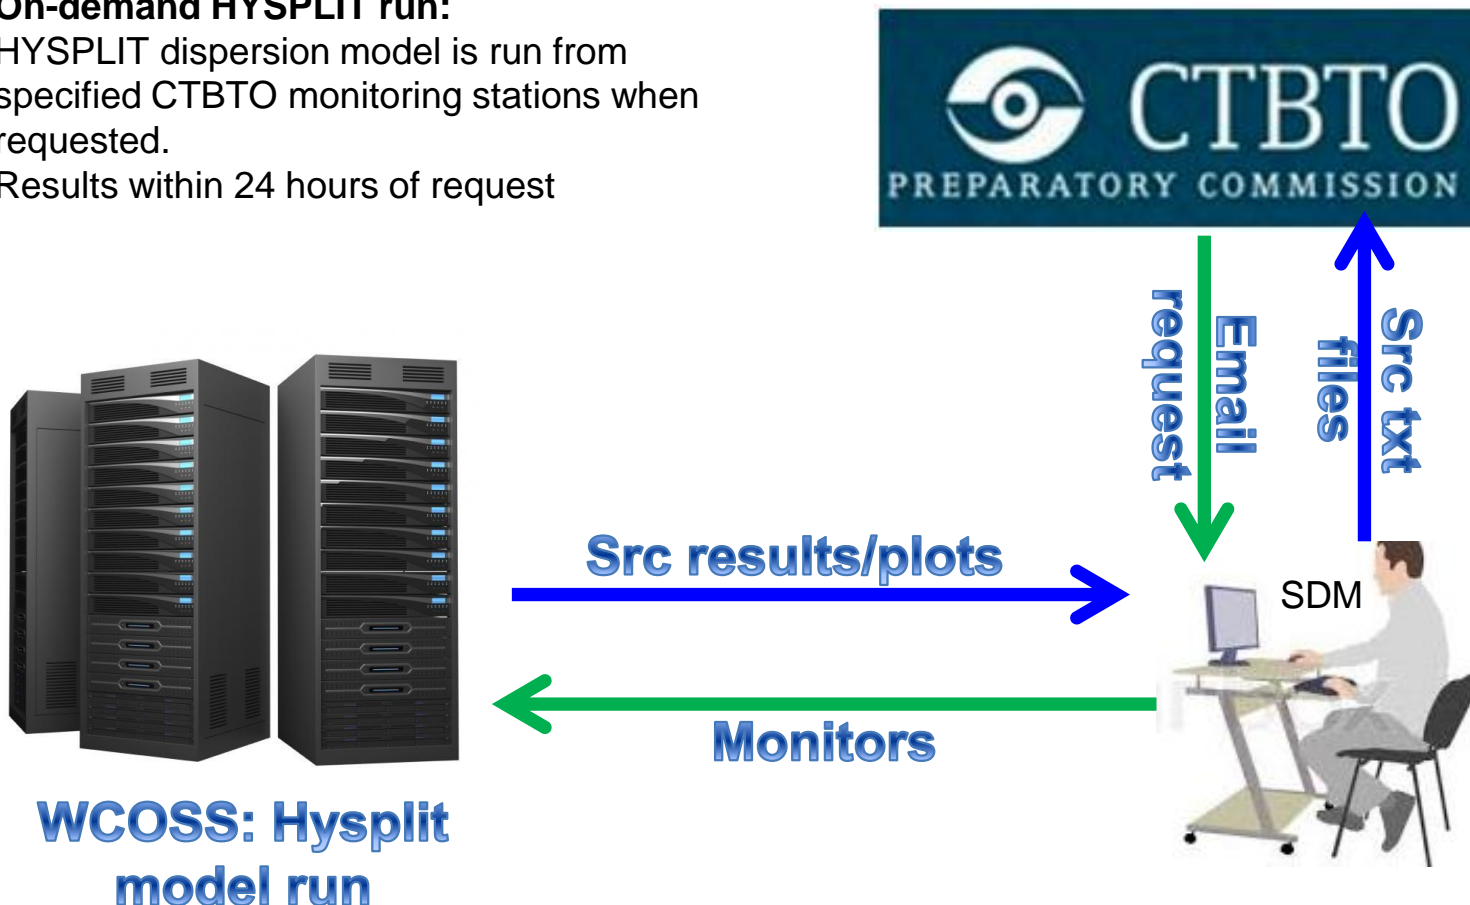

CTBTO overview

On-demand HYSPLIT run:

HYSPLIT dispersion model is run from specified CTBTO monitoring stations when requested.

Results within 24 hours of request

- SDM/SOS transfers input request file for processing to WCOSS
- Typically 7-10 different receptor locations and/or receptor times
- GDAS (1 degree 6 hrly) 30 day rotating archive to drive back-tracking
- WCOSS output text and graphics transferred to NCO server

Source-Receptor Relationship

- Source Receptor Sensitivity (SRS) field M_{kijn} or retro-plume or dilution factor field $[m^{-3}]$ is specific to each radionuclide sample
- A retro-plume is simulated by running an atmospheric transport model backward in time with “releases” corresponding to radionuclide samples
- SRS translates any **grid point** release at position i,j and transport time from source to receptor n [Bq] into the activity concentration c_k $[Bqm^{-3}]$ for the kth sample :

$$c_k = M_{kijn} \cdot S_{ijn}$$

CTBTO: IMS radionuclide network

RN station locations of the International Monitoring System
(79 of 80 currently determined)

Network performance:

Detect debris from a 1 kt nuclear explosion within 14 days of an event with 90 % probability

All stations will be equipped with an aerosol sampling system (high volume sampling) and high-purity Germanium detectors

50% of the stations will, in addition, be equipped with a noble gas sampling system

JOB / RESOURCE REQUIREMENTS

New executables, jobs, and scripts

— Primarily CTBTO:

~/jobs

JHYSPT_CTBTO_CHK, JHYSPT_CTBTO_FCS, JHYSPT_CTBTO_POST

~/scripts (.sh.ecf) *UPDATE*: exhysplit_prep

exhysplit_ctbto_request_chk, exhysplit_ctbto_fcst, exhysplit_ctbto_post

~/sorce hysplit_set4ctbt.fd, hysplit_con2ctbt.fd

~/exec hysplit_set4ctbt, hysplit_conc2ctbt;

UPDATE: hysplit_hycsst, hysplit_concplot, etc...

~/fix ctbto_ascdata.cfg, ctbto_setup.cfg, ctbto_arlmap

- ARL Hysplit library update
- Extend ARL formatted GDAS files from 7 to 30 day rotating archive
- ½ degree GFS ARL-Packed format file for Volc Ash (hysplit_global2arl)
- New capability : CTBTO source attribution run with text output
 - 1 additional node for around 60 minutes for 10 sites
- NCO web server capability : For invoking CTBTO run and evaluating output

EE READINESS

- HYSPLIT V7 already uses vertical structure
 - `/nwprod/hysplit.v7.0.2`

PRODUCT CHANGES

HYSPLIT currently generates:

- 12 km hourly smoke and dust grib files for surface and column levels
Displayed at NDGD
- Volcanic ash grib file, RSMC dispersion graphics
- DHS/HAZMET graphics

Changes:

- CTBTO ascii source probability text file and graphics
- WCOSS files/graphics → NCO web server → CTBTO
- SDM reviews before transmission to CTBTO

NOTE: CTBTO Products to remain internal to NCO & CTBTO

- GRIB2 smoke/dust/volcanic ash output files instead of GRIB1

Analysis of New Product Volume

Disk Usage	Current Production	Expected New Production	Actual New Production
IBM Disk	724.1 GB/day	+9 GB - CTBTO +6 GB - ½ ° GFS	-
IBM Tape	similar minimal	change	-
NCEP FTP Server	similar minimal	+6 GB ; ½ ° GFS ARL Packed file	-
NWS FTP Server	similar minimal	No change	-

DEPENDENCIES

UPSTREAM: GFS, NAM, RAP,
NESDIS HMS smoke locations,
USFS Bluesky emissions

DOWNSTREAM: NDGD (smoke, dust), NAWIPS (Volc. Ash),
ARL RSMC radiological web graphics page, WOC HAZMAT

Upstream dependency requires following enhancements:

1. CTBTO input file transmission to WCOSS from NCO server.
 - Run then invoked by SOS on WCOSS
2. HYSPLIT Tested with Production GFS ,NAM, RAP

Downstream dependency requires following enhancements:

1. Transfer CTBTO ascii file & graphics from WCOSS to NCO server and then to CTBTO after SDM review.
2. Transfer RSMC radiological text to MWOs (AWC, HI, AK).

TIN: To be prepared and issued by or before August

NAQFC : HYSPLIT Dispersion Model

Project Status as of 5/14/2014

Scheduling

Project Information and Highlights

Lead: Jeff McQueen, Jianping Huang, EMC, Barbara Stunder, ARL, Chris Magee, NCO

Scope:

1. Meteo Prep
 - extend retention of GDAS hysplit format files in /com/hysplit to 30 days
 - Add ½ degree GFS hysplit format files
2. CTBTO – new application & web GUI for model configuration
3. On-demand SDM Hysplit runs (volc. ash, RSMC, DHS)
 - Output and processing of grib2 instead of grib1
 - Graphics bug fixes
 - Transfer RSMC radiological text product to MWOs (AWC, Anchorage and Honolulu).
4. Smoke/dust/ash
 - Include Canadian & Mexican smoke emissions for smoke application
5. All: Update to unified HYSPLIT code and libraries

Expected Benefits:

1. Meet NWS, CTBTO, WMO, ICAO, FAA, DHS requirements.
2. Consistent Hysplit executables, libs for all applications
3. Higher res met for volc. Ash/ RSMC response

Issues:

- Major upgrade : New capability
- NCO to lead transition of CTBTO web pages
-

Mitigation:

- Delay implementation of capabilities

Milestone (NCEP)	Date	Status
EMC-NCO Kickoff Meeting	01/29/2014	Update on 2/11/14
